

WHAT IS AN ACCOLADE WEATHER SCREEN?

Simply a solid aluminium extrusion made to form a rigid frame.

Then fitted with a clear weather resistant flexible material. This membrane has been stretched to create an optical appearance similar to that of a glazed window, but with the safety of plastic.

- Weather resistant
- Safe (unbreakable)
- Light weight
- Easy to operate
can be stored away
- Made to measure
- Affordable
- Many colours available
- Can be filled with mesh
membrane

These screens can be used to create a weather proof area from an existing veranda or pergola. They can be easily dismantled and stored or simply left in place and opened up in minutes using our new bi-fold system. The screens can also be hinged to create doors and openings.

The screens have the clarity almost of glass but with the added benefit of being unbreakable, light weight and easily adapted to most circumstances. You can easily fix the screens yourself or have Accolade Weather Screens do the installation.

Although the maximum width of each panel is 1.3 mtrs (depending on wind conditions), the screens can be connected together to enclose any size area.
